

## DOMAIN SET-UP WITH BLOGSPOT

>> Login to your Blogger account at [www.blogger.com](http://www.blogger.com)

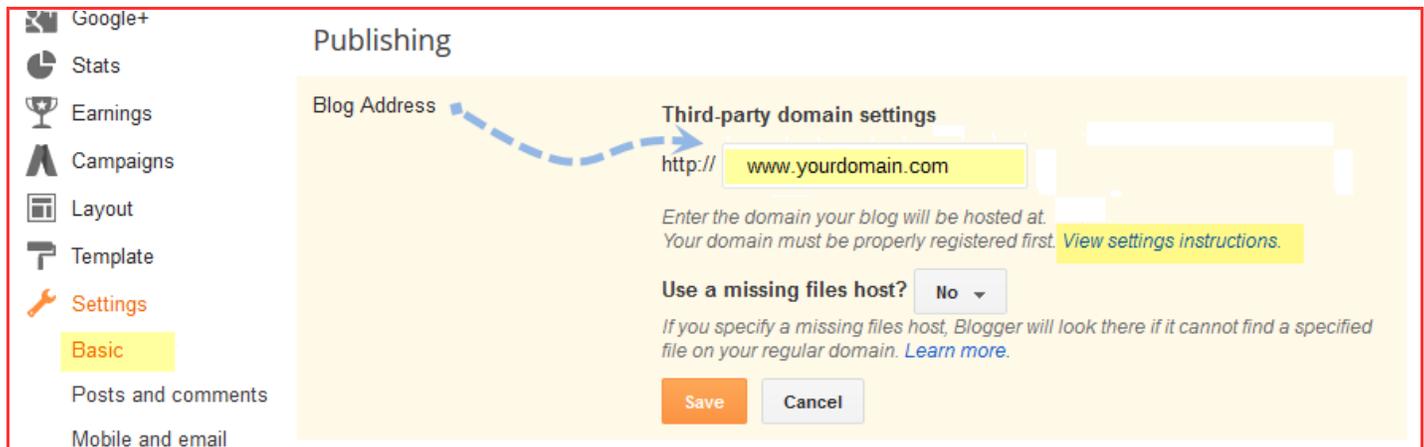

>> Click on your blog and then go to → **Settings**, choose → **Basic**.

Under → **Publishing** section, → click **+Setup a third-party URL for your blog**

The screenshot shows the Blogger Settings interface for a 'Basic' blog. On the left is a navigation menu with 'Settings' and 'Basic' highlighted. The main content area is titled 'Publishing' and shows the 'Blog Address' field with the value 'helplogger.blogspot.com'. Below this, a red box highlights the link '+ Set up a third-party URL for your blog'. A dashed green arrow points from the 'Blog Address' field to this link. Below the 'Publishing' section is the 'Permissions' section, which shows 'Blog Authors' with one user named 'Admin' and a '+ Add authors' link.

>> Under → **Third-party domain settings** → enter the domain name you registered from **Pangalan.com** next to **http://** input box.

This screenshot shows the 'Third-party domain settings' dialog box in Blogger. A dashed blue arrow points from the 'Blog Address' field in the background to the 'Third-party domain settings' section. The dialog box has a yellow background and contains the following elements: a text input field with 'http://' followed by a highlighted box containing 'www.yourdomain.com'; a note that says 'Enter the domain your blog will be hosted at. Your domain must be properly registered first. View settings instructions.'; a dropdown menu for 'Use a missing files host?' set to 'No'; and a note that says 'If you specify a missing files host, Blogger will look there if it cannot find a specified file on your regular domain. Learn more.'; and 'Save' and 'Cancel' buttons at the bottom.

>> Click → **View Settings instructions** to get the blogger's official instruction. On the blogger instruction page, choose the → **On a top-level domain** (www.yourdomain.com) option.

>> Go back to your Blogger Settings and press → **Save**. It won't get save and an error will appear saying **We have not been able to verify your authority to this domain. Error 32**

Under The Error, you will see two fields → **Name, Label or Host Field and Destination, target or Points to Fields**.  
→ **Copy** data of both rows from these fields.

The screenshot shows the Blogger Publishing settings page. On the left is a navigation menu with options like Google+, Stats, Earnings, Campaigns, Layout, Template, Settings, Basic, Posts and comments, Mobile and email, Language and formatting, Search preferences, and Other. The main content area is titled 'Publishing' and contains 'Blog Address' and 'Third-party domain settings'. The 'Third-party domain settings' section shows a text input field with 'http:// www.yourdomain.com'. Below this is a red error message: 'We have not been able to verify your authority to this domain. Error 32.' Underneath the error is a table with two columns: 'Name, Label or Host field' and 'Destination, Target or Points To field'. The table contains two rows: one with 'www' pointing to 'ghs.google.com' and another with 'cv6785pnlsk' pointing to 'gv-bhcv6785pnlsk.dv.googlehosted.com'. A red callout bubble with the text 'copy details' points to the table. Below the table is a paragraph of instructions about CNAMEs and DNS settings.

Name, Label or Host field	Destination, Target or Points To field
www	ghs.google.com
cv6785pnlsk	gv-bhcv6785pnlsk.dv.googlehosted.com

>> Now login to your Pangalan control panel from URL: <https://mypanel.pangalan.com/cp/login.cgi>

Once login → Click on the **Subscription** drop down and choose **All My Domains**

The screenshot shows the Pangalan.com control panel interface. At the top left is the Pangalan.com logo with the tagline 'Building your online presence'. On the top right, there is a 'Subscriber' field and a 'Subscription' dropdown menu currently set to 'All My Domains'. A red circle highlights the dropdown arrow, and a large black arrow points upwards towards it. Below the navigation bar are several menu items: Home, All My Domains, Domain Contacts, Account, and Help and Support. The main content area is divided into two sections: 'Store' and 'Account'. The 'Store' section includes a gold coin icon and links for 'Register New Domain', 'Buy More Services', 'Change Hosting Plan', and 'Buy Resources'. The 'Account' section includes a user profile icon, 'Outstanding documents' with a value of '0.00P', and links for 'Billing History', 'Subscriptions', and 'Payment Methods'. At the bottom of the page, there is a copyright notice: '© Copyright 2016, Pangalan. All rights reserved.'

>> Click → **All My Domains** tab → click to select your **Domain Name**

You are done configuring your domain.

>> Go back to your Blogger and try to save settings again. The DNS update may takes approximately 24-48 hours to propagate. So don't worry if you get an error again, came back later and repeat step 2-4, and press Save.

>> In addition to, once your website start working, click on the **Edit** link next to your domain name on the setting page.

>> Check mark --> Redirect yourdomain.com to www. yourdomain.com and click **Save**. This to ensure that even if your website visitors miss out to key in the www part (your naked domain or non www) they will still be able to reach your site.

**Advanced settings**
